Memoria de traducción: The Renal System at a Glance

Paula Fernández Quesada
Tutor: Prof. José Luis Martí
A renal mass, or tumor, is an abnormal growth in the kidney. Some renal masses are benign (not cancerous) and some are malignant (cancerous). Learn more in this article. Your healthcare provider may use a special grading system for your kidney disease. This grading system uses numbers or letters that give details about the tumor. The grades 1 through 4 show increasing severity with "1" being the lowest level and "4" the highest. A higher grade and more advanced stage usually mean larger tumor size and more aggressive tumors. Your doctor can only grade your tumor by looking at it under a microscope.

Staging. Following the American Joint Committee on Cancer (AJCC) guidelines, kidney cancer is staged using the tumor node metastases (TNM) system...
