Abstract
Originally published in Contemporary Psychology: APA Review of Books, 1979, Vol 24(6), 455–456. Reviews the book, Implicit Psychology: An Introduction to Social Cognition by Daniel M. Wegner and Robin R. Vallacher (see record 1979-08483-000). This is the first textbook expressly concerned with social cognition—how people come to know their social world. It is simultaneously the first concerned with implicit psychology. There are chapters on the implicit theories of motivation, personality, abnormal psychology, social relations, and the self. The authors’ concern with the behavioral consequences of social cognition is laudable. The authors suggest using the book as a supplementary text, but it could serve as the main text for a course in social cognition. Appraised purely as a textbook, this book earns very high marks. Psychologist and philosopher William James is often referred to as the father of American psychology. His teachings and writings helped establish psychology as a science. Lev Vygotsky was a contemporary of some better-known psychologists including Piaget, Freud, Skinner, and Pavlov, yet his work never achieved the same eminence during his lifetime. This is largely because many of his writing remained inaccessible to the Western world until quite recently. Psychologist and psychometrician Robert Sternberg is the president of the University of Wyoming. One of Sternberg's greatest endowments to the world of psychology is the "Triarchic theory of intelligence," which states that intelligence can be divided into creative, analytical and practical components. Geoffrey Beattie is a psychologist as well as a minor celebrity, known for his many appearances on British television. His field of interest is nonverbal communication, and he has authored many books and articles on the subject.
