12th Pacific Rim International Symposium on Dependable Computing

18-20 December 2006 • Riverside, California

Editors
Daniel Jeske
Gianfranco Ciardo
Yuan-Shun Dai

Sponsored by
IEEE Computer Society Technical Committee on Fault-Tolerant Computing
University of California, Riverside

In cooperation with
IFIP WG 10.4 on Dependable Computing and Fault Tolerance

Los Alamitos, California
Washington • Tokyo
Table of Contents

Message from the General and Program Chairs .......................................................... xi
Referees ................................................................................................................................... xii

Session 1: Reliability Modeling

Two-Dimensional Software Reliability Models and Their Application ................................................................. 3
Tomotaka Ishii and Tadashi Dohi

A Strategy for Verification of Decomposable SCR Models .......................................................................................... 11
Dejan Desovski and Bojan Cukic

Detection and Correction Process Modeling Considering the Time Dependency ................................................................. 19
Y. P. Wu, Q. P. Hu, M. Xie, and S. H. Ng

Detecting and Exploiting Symmetry in Discrete-State Markov Models ................................................................................. 26
W. Douglas Obal II, Michael G. McQuinn, and William H. Sanders

Session 2: Fault Detection

An Evaluation of Similarity Coefficients for Software Fault Localization ............................................................................ 39
Rui Abreu, Peter Zoeteweij, and Arjan J. C. van Gemund
SEVA: A Soft-Error- and Variation-Aware Cache Architecture .................................................................................47
  Luong D. Hung, Masahiro Goshima, and Shuichi Sakai

An OS-Level Framework for Providing Application-Aware Reliability .............................................................55
  Long Wang, Zbigniew Kalbarczyk, Weining Gu, and Ravishankar K. Iyer

Minimal System Conditions to Implement Unreliable Failure Detectors .................................................................63
  Antonio Fernández, Ernesto Jiménez, and Sergio Arévalo

**Session 3: Software Test**

A New Approach to Improving the Test Effectiveness in Software Testing Using Fault Collapsing .................................................................73
  Shiyi Xu

A Framework for Inheritance Testing from VDM++ Specifications ..............................................................................81
  Aamer Nadeem and Michael R. Lyu

Assessment on Undetectable Burst Errors in Tandem CRCs ......................................................................................89
  Meng-Lai Yin and Bruce Orenstein

Efficient Built-In Self-Test Schemes for Video Coding Cores: A Case Study on DCT/IDCT Circuits .................................97
  Shyue-Kung Lu, Ting-Yu Chen, and Wei-Yuan Liu

**Session 4: Security**

Flexible, Cost-Effective Membership Agreement in Synchronous Systems .................................................................105
  Raul Barbosa and Johan Karlsson

Towards Adaptive Secure Group Communication: Bridging the Gap between Formal Specification and Network Simulation .....................................................................113
  Sebastian Gutierrez-Nolasco, Nalini Venkatasubramian, Mark-Oliver Stehr, and Carolyn Talcott

Quantum Oblivious Transfer and Fair Digital Transactions .....................................................................................121
  Yao-Hsin Chou, I-Ming Tsai, Chien-Ming Ko, Sy-Yen Kuo, and Ing-Yi Chen

Storing RSA Private Keys in Your Head .........................................................................................................................129
  Taisya Krivoruchko, James Diamond, and Jeff Hooper

**Session 5: Availability**

Database Transaction Management for High-Availability Cluster System ..............................................................139
  Ken-ichiro Fujiyama, Nobutatsu Nakamura, and Ryuichi Hiraike

Restoration Strategies in Mesh Optical Networks: Cost vs. Service Availability ..........................................................147
  Daniel R. Jeske and Ashwin Sampath
Session 6: Intrusion Detection

Base Address Recognition with Data Flow Tracking for Injection Attack Detection
Satoshi Katsunuma, Hiroyuki Kurita, Ryota Shioya, Kazuto Shimizu, Hidetsugu Irie, Masahiro Goshima, and Shuichi Sakai

A Stateful Approach to Spyware Detection and Removal
Ming-Wei Wu, Yennun Huang, Yi-Min Wang, and Sy-Yen Kuo

Session 7: Reliability Prediction and Optimization

A Best Practice Guide to Resource Forecasting for the Apache Webserver
Günther A. Hoffmann, Kishor S. Trivedi, and Miroslaw Malek

Software Reliability Prediction and Assessment Using Both Finite and Infinite Server Queueing Approaches
Wei-Chih Huang, Chin-Yu Huang, and Chuan-Ching Sue

On Statistically Estimated Optimistic Delivery in Wide-Area Total Order Protocols
José Mocito, Ana Respício, and Luís Rodrigues

Early Software Reliability Prediction with ANN Models
Q. P. Hu, M. Xie, and S. H. Ng

Session 8: Dependability Applications

A Dependable Outbound Bandwidth Based Approach for Peer to Peer Media Streaming
Zheng-Yi Huang and Sheng-De Wang

A Pragmatic Protocol for Database Replication in Interconnected Clusters
J. Grov, L. Soares, A. Correia Jr., J. Pereira, R. Oliveira, and F. Pedone

An Efficient Commit Protocol Exploiting Primary-Backup Placement in a Distributed Storage System
Xiangyong Ouyang, Tomohiro Yoshikawa, and Haruo Yokota

Reliable Video Transmission Techniques for Wireless MPEG-4 Streaming Systems
Sheng-Tzong Cheng and Jian-Liang Lin
Session 9: Survivability

On the Fly Estimation of the Processes That Are Alive/Crashed in an Asynchronous Message-Passing System .................................................................................................................................................................................. 259
  Achour Mostefaoui, Michel Raynal, and Gilles Tredan

Synchronous Set Agreement: A Concise Guided Tour (including a New Algorithm and a List of Open Problems) .................................................................................................................................................................................. 267
  Michel Raynal and Corentin Travers

Dependable Multithreaded Processing Using Runtime Validation .................................................................................................................................................................................. 275
  Kaiyu Chen and Sharad Malik

Session 10: Optimization

Improving Fast Paxos: Being Optimistic with No Overhead .................................................................................................................................................................................. 287
  Bernadette Charron-Bost and André Schiper

Fault-Tolerant Partitioning Scheduling Algorithms in Real-Time Multiprocessor Systems .................................................................................................................................................................................. 296
  Hakem Beitollahi and Geert Deconinck

Resource Availability Optimization for Priority Classes in a Website .................................................................................................................................................................................. 305
  V. P. Koutras and A. N. Platis

Session 11: Maintenance and Recovery

Design Trade-Offs and Deadlock Prevention in Transient Fault-Tolerant SMT Processors .................................................................................................................................................................................. 315
  Xiaobin Li and Jean-Luc Gaudiot

Incorporating Network Connectivity Analysis in Maintenance Planning .................................................................................................................................................................................. 323
  Meng-Lai Yin and Rafael R. Arellano

Low-Overhead Run-Time Memory Leak Detection and Recovery .................................................................................................................................................................................. 329
  Timothy Tsai, Kalyan Vaidyanathan, and Kenny Gross

Session 12: Performance and Reliability

End-to-End Consensus Using End-to-End Channels.................................................................................................................................................................................. 341
  Matthias Wiesmann and Xavier Défago

Performance and Reliability Analysis of Web Server Software Architectures .................................................................................................................................................................................. 351
  Swapna S. Gokhale, Paul J. Vandal, and Jijun Lu

A Single-Chip Fail-Safe Microprocessor with Memory Data Comparison Feature .................................................................................................................................................................................. 359
  Kotaro Shimamura, Takeshi Takehara, Yosuke Shina, and Kunihiko Tsunedomi
Short Paper Track 1

Evaluating the Impact of Fault Recovery on Superscalar Processor Performance .......................................................... 369
  Toshinori Sato and Akihiro Chiyonobu

A Scenario of Tolerating Interaction Faults between Otherwise Correct Systems .......................................................... 371
  Bogdan Tomoyuki Nassu and Takashi Nanya

Detection and Recovery for Disconnection Failures in a Web-Based Medical Teleconsultation System .......................................................... 373
  Kuo-Feng Ssu, Chih-Hsun Chou, Wei-Te Shih, Pau-Choo Chung, and Hewijin C. Jiau

Leader Election in the Timed Finite Average Response Time Model .................................................................................. 375
  Christof Fetzer and Martin Süßkraut

A Replication Model for Trading Data Integrity against Availability .................................................................................. 377
  Johannes Osrael, Lorenz Froihofer, and Karl M. Goeschka

Improving Data Transmission with Helping Nodes for Geographical Ad Hoc Routing .......................................................... 379
  Shin-Hung Chung, Kuo-Feng Ssu, Chih-Hsun Chou, and Hewijin Christine Jiau

Towards Timely ACID Transactions in DBMS .................................................................................................................. 381
  Marco Vieira, António Casimiro Costa, and Henrique Madeira

Monitoring Database Application Behavior for Intrusion Detection .................................................................................. 383
  José Fonseca, Marco Vieira, and Henrique Madeira

Short Paper Track 2

Implementation Results of a Configurable Membership Protocol for Active Safety Systems .......................................................... 387
  Carl Bergenhem, Johan Karlsson, Christian Archer, and Andreas Sjöblom

Ontology Based IT-Security Planning .................................................................................................................................. 389
  Stefan Fenz and Edgar Weippl

The Hierarchy of BGP Convergence on the Self-Organized Internet .................................................................................. 391
  Jinjing Zhao, Peidong Zhu, Xicheng Lu, and Feng Zhao

Dynamic Reconfiguration Policies for Reconfigurable Coded-WDM PONs ........................................................................ 393
  Chuan-Ching Sue

Fault-Tolerant Rate-Monotonic Scheduling Algorithm in Uniprocessor Embedded Systems .................................................. 395
  Hakem Beitollahi and Geert Deconinck

The Survivability of the Augmented Logical Ring Topology in WDM Networks ........................................................................ 397
  Yung-Chiao Chen, Chuan-Ching Sue, and Sy-Yen Kuo
PRDC organizes a series of symposia started in 1989 that are devoted to dependable and fault-tolerant computing. PRDC is recognized as the main event in the Pacific area that covers the many dimensions of dependability and fault tolerance, encompassing fundamental theoretical approaches, practical experimental projects, and commercial components and systems. As applications of computing systems have permeated into all aspects of daily life, the dependability of computing system has become increasingly critical. This symposium provides a forum for countries around the Pacific Rim and other area Dependability issues in computer networks and communications. Cloud and Internet Information security. Dependability issues in real-time systems, database, and transaction processing systems. Dependability issues in distributed and parallel systems. Dependability issues in aerospace and embedded systems. Dependability issues in autonomic computing. Dependability issues in socio-technical systems. Dependability issues in cyber-physical systems. 25th IEEE Pacific Rim International Symposium on Dependable Computing (PRDC 2020) will be held in Perth, Australia on 01-04 Dec 2020. Lowest Price Hotel
