The most comprehensive and current full-color cardiac surgery resource – updated by leading surgeons. In Cardiac Surgery in the Adult, Fifth Edition, the world’s foremost cardiovascular surgeons deliver thorough, up-to-date coverage of operative strategy, decision making, technique, and pre- and postoperative management for treating the adult cardiac patient. Unmatched in both scope and clinical rigor, this classic text contains 63 chapters that highlight every important topic in cardiovascular surgery. Presented in full color, Cardiac Surgery in the Adult takes readers through the optimal treatment of congenital, acquired, infectious, and traumatic diseases of the heart and great vessels. The book opens with a history of cardiac surgery and basic cardiac science, then moves into all types of cardiac surgery, providing both practicing surgeons and residents with insight into the very latest surgical protocols.

BACKGROUND: In the countries without cardiac surgery general cardiologists frequently have to manage adult patients with unoperated congenital heart disease (CHD). METHODS: Using the registry of our cardiology department of all cases presented to the echocardiographic laboratory from May 2001 to April 2009 were reviewed. This article will endeavour to accomplish four things: to point out some of the more common challenges in the assessment and management of adult patients with congenital heart defects (CHD); to review in general which adult patients with CHD do not need to be seen in specialised adult CHD centres; to review which patients should be seen in such specialised centres.
