

Liverpool John Moores University

Title: PRIMATE BIOLOGY
Status: Definitive
Code: **5003NATSCI** (112580)
Version Start Date: 01-08-2014

Owning School/Faculty: Natural Sciences & Psychology
Teaching School/Faculty: Natural Sciences & Psychology

Team	Leader
Nicola Koyama	Y
Emily Bethell	
James Ohman	

Academic Level: FHEQ5 **Credit Value:** 24.00 **Total Delivered Hours:** 49.00
Total Learning Hours: 240 **Private Study:** 191

Delivery Options

Course typically offered: Standard Year Long

Component	Contact Hours
Lecture	24.000
Off Site	6.000
Practical	1.000
Seminar	6.000
Workshop	10.000

Grading Basis: 40 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	AS1	short answer & essay	40.0	2.00
Presentation	SEM	group seminar	30.0	
Presentation	POST	poster on primate conservation	30.0	

Aims

To provide an introduction to the diversity and biology of the living non-human

primates.

Learning Outcomes

After completing the module the student should be able to:

- 1 Discriminate between features of living primate taxa.
- 2 Distinguish between the characteristic anatomical and physiological adaptations of the living primates.
- 3 Discuss interspecific relationships between sympatric species of primates and other members of the community.
- 4 Appraise current theories of primate evolution and cognition.
- 5 Appraise major population threats to primates and critically evaluate appropriate strategies for their conservation.

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

EXAM	1	2	3	4
SEMINAR	2	4		
POSTER2	5			

Outline Syllabus

Characteristics of primates. Diversity, taxonomy and biogeography of the living forms. An overview of primate evolution. Locomotion and arboreal adaptations. Body size and energy requirements. The diversity of primate diets and dietary adaptations. Life history patterns and factors affecting life history variables among primates.

The primate brain and senses. Sense organs: nose and olfaction, oral cavity, tongue and taste, auditory region and hearing, eyes and eyesight. Reproductive biology: the primate reproductive cycle and sexual behaviour. Primate community ecology: polyspecific associations. Primate cognitive abilities. An introduction to primate conservation including current threats to primate populations and possible conservation strategies.

Learning Activities

Lectures, practical, fieldwork, workshops, seminar presentation and poster session.

Notes

The module examines the diversity and biology of the living primates. A comparative approach is taken to study a range of morphological, physiological, and ecological characteristics.

It is a comprehensive, beautifully illustrated guide of the 234 currently recognized species of primates. There are over 260 pages, 500 plus photo's and also illustrations. When this book arrived, I flipped through the pages and was very happy that I had purchased it. If I want some fairly detailed information on any of the primates, I always use this book first, as it is so quick and easy to find any of the primates I may be looking for. It is my most Prized book on primates to date. Pictorial Guide to the Living Primates. Read more. One person found this helpful. The lower primates, including the lemurs, lorises, and tarsiers, were the first primates, occurring in North America, Europe, and Asia. Lemurs now occur only on Madagascar, an island off the coast of Africa. They are mostly tree-dwelling, nocturnal (active at night) animals with a moist snout (nose) and a long, furry tail. They are the largest living arboreal mammals, spending the daylight hours moving through the forest canopy in search of fruit, leaves, tree bark, and insects. Many orangutans live to 50 or 60 years of age. Chimpanzees are partly arboreal, partly ground-dwelling primates that live in the forests of west, central, and east Africa. They are agile creatures that can move rapidly through treetops. Start by marking "Pictorial Guide to the Living Primates" as Want to Read: Want to Read savingâ€¦| Want to Read. Currently Reading. Read. Other editions. Enlarge cover. Want to Read savingâ€¦| Error rating book. Refresh and try again. This book is an attractive photographic guide to the 234 currently recognized primate species with over 500 color photographs and 20 illustrations. The text of each species is comprised of basic information about habitat, diet, social structure and behavior, A range map and the current category of endangerment is provided for each species. Get A Copy. Amazon. Pogonias Press, the publisher of The Pictorial Guide to the Living Primates has generously donated a limited number of hard and soft cover copies to Primate Conservation Inc. For a donation to PCI of \$75.00 you can receive a hard cover version of the most complete book about primates. For a donation to PCI of \$55.00 you can receive a soft cover version. (The only difference between them is the binding.) For a donation of \$150.00 the author, who is the director of PCI, will personally sign a hard bound book to you. All donations will be used to further the goals of PCI to study and protect the
